IN THE CLAIMS:

Please amend the claims as follows:

1.   (Currently Amended) A ~~personal digital assistant~~ mobile device for receiving service information from a service information distribution device, comprising:

a sending ~~means for sending~~ unit adapted to send use information of ~~a user~~ ~~using said personal digital assistant device intermittently~~ the mobile device at a movement destination of the mobile device to the service information distribution device to be added to a history database managed by ~~said~~ the service information distribution device; and

a receiving ~~means for receiving~~ unit adapted to receive the service information selected by ~~said~~ the service information distribution device ~~on the basis of~~ ~~history of the use information stored in said history database~~, from ~~said~~ the service information distribution device,

wherein the received service information is selected by the service information distribution device on the basis of the history database in which the use information sent by said sending unit is reflected.

2.   (Currently Amended) A ~~personal digital assistant~~ mobile device according to claim 1, wherein the use information includes positional information of ~~said~~ ~~personal digital assistant~~ the mobile device.

- 2 -

3.   (Currently Amended) A ~~personal digital assistant~~ mobile device according to claim 1, wherein said sending ~~means~~ unit sends use information requested by ~~said~~ the service information distribution device ~~to be sent~~.

4.   (Currently Amended) A ~~personal digital assistant~~ mobile device according to claim 1, further comprising a display ~~means for displaying~~ unit adapted to display the service information received by said receiving ~~means~~ unit.

5.   (Currently Amended) A service information distribution device for distributing service information to a ~~personal digital assistant~~ mobile device, comprising:

a receiving ~~means for receiving~~ unit adapted to receive use information of ~~a user intermittently from said personal digital assistant device~~ the mobile device at a movement destination of the mobile device;

a storing ~~means for storing~~ unit adapted to store the received use information in a history database as history data of the mobile device;

a selection ~~means for selecting~~ unit adapted to select service information to be distributed to ~~said personal digital assistant~~ the mobile device on the basis of ~~the use information stored in said history database~~ the history database in which the use information received by said receiving un it is reflected; and

a distribution ~~means for distributing~~ unit adapted to distribute the service information selected by said selection ~~means~~ unit to ~~said personal digital assistant~~ the mobile device.

6.   (Currently Amended) A service information distribution device according to claim 5, wherein the use information includes positional information of ~~said personal digital assistant~~ the mobile device.

7.   (Currently Amended) A service information distribution device according to claim 6, wherein said selection ~~means~~ unit selects service information regarding a zone by discriminating the zone having high frequency of dropby on the basis of the history data regarding the positional information.

8.   (Original) A service information distribution device according to claim 5, wherein the service information includes congestion degree information.

9.   (Currently Amended) A service information distribution device according to claim 5, wherein the service information includes at least one of informations regarding sale of an article, advertisement distribution, reservation, hall guidance, opening of an event and an attraction, suitable for ~~said personal digital assistant~~ the mobile device.

10.   (Currently Amended) A service information distribution device according to claim [[6]] 5, wherein said distribution ~~means~~ unit distributes the selected service information in response to a request from ~~said personal digital assistant~~ the mobile device.

11. (Currently Amended) A service information distribution device according to claim 10, wherein said distribution ~~means~~ unit distributes selected positional information of another ~~personal digital assistant~~ mobile device in response to a request regarding positional information of said another ~~personal digital assistant~~ mobile device from ~~said personal digital assistant~~ the mobile device.

12. (Original) A service information distribution device according to claim 5, wherein said history database also stores accounting information for the user.

13. (Currently Amended) A control method for controlling a ~~personal digital assistant~~ mobile device for receiving service information from a service information distribution device, comprising:

a sending step for sending use information ~~of a user using said personal digital assistant device intermittently~~ of the mobile device at a movement destination of the mobile device to the service information distribution device to be added to a history database managed by ~~said~~ the service information distribution device; and

a receiving step for receiving the service information selected by ~~said~~ the service information distribution device ~~on the basis of history of the use information stored in said history database~~, from ~~said~~ the service information distribution device,

wherein the received service information is selected by the service information distribution device on the basis of the history database in which the use information sent by said sending unit is reflected.

14. to 16. (Cancelled).

17.   (Currently Amended) A control method for controlling a service information distribution device for distributing service information to a ~~personal digital assistant~~ mobile device, comprising:

a receiving step for receiving use information of ~~a user intermittently from said personal digital assistant device~~ the mobile device at a movement destination of the mobile device;

a storing step for storing the received use information in a history database as history data of the mobile device;

a selecting step for selecting service information to be distributed to ~~said personal digital assistant~~ the mobile device on the basis of ~~the use information stored in said history database~~ the history database in which the use information received in said receiving step is reflected; and

a distributing step for distributing the service information selected by said selecting step to ~~said personal digital assistant~~ the mobile device.

18. to 24. (Cancelled).

25.   (Currently Amended) A control program capable of being executed by a computer for controlling a ~~personal digital assistant~~ mobile device for receiving service information from a service information distribution device, comprising:

a program code for executing a sending step for sending use information ~~of~~
~~a user using said personal digital assistant device intermittently~~ of the mobile device at a
movement destination of the mobile device to the service information distribution device to
be added to a history database managed by ~~said~~ the service information distribution device;
and

a program code for executing a receiving step for receiving the service
information selected by ~~said~~ the service information distribution device ~~on the basis of~~
~~history of the use information stored in said history database~~, from ~~said~~ the service
information distribution device,

wherein the received service information is selected by the service
information distribution device on the basis of the history database in which the use
information sent by said sending unit is reflected.

26.   (Currently Amended) A control program capable of being executed
by a computer for controlling a service information distribution device for distributing
service information to a ~~personal digital assistant~~ mobile device, comprising:

a program code executing a receiving step for receiving use information of a
~~user intermittently from said personal digital assistant device~~ the mobile device at a
movement destination of the mobile device;

a program code executing a storing step for storing the received use
information in a history database as history data of the mobile device;

a program code for executing a selecting step for selecting service information to be distributed to ~~said personal digital assistant~~ the mobile device on the basis of ~~the use information stored in said history database~~ the history database in which the use information received by said receiving step is reflected; and

a program code for executing a distributing step for distributing the service information selected by said selecting step to ~~said personal digital assistant~~ the mobile device.

27.   (Currently Amended) A storing medium storing a control program capable of being read by a computer for controlling a ~~personal digital assistant~~ mobile device for receiving service information from a service information distribution device, the control program comprising:

a program code for executing a sending step for sending use information ~~of a user using said personal digital assistant device intermittently~~ of the mobile device at a movement destination of the mobile device to the service information distribution device to be added to a history database managed by ~~said~~ the service information distribution device; and

a program code for executing a receiving step for receiving the service information selected by ~~said~~ the service information distribution device ~~on the basis of history of the use information stored in said history database~~, from ~~said~~ the service information distribution device.

- 8 -

wherein the received service information is selected by the service

information distribution device on the basis of the history database in which the use

information sent by said sending unit is reflected.

28.   (Currently Amended) A storing medium storing a control program

capable of being read by a computer for controlling a service information distribution

device for distributing service information to a ~~personal digital assistant~~ mobile device, the

control program comprising:

a program code executing a receiving step for receiving use information of a

~~user intermittently from said personal digital assistant device~~ the mobile device at a

movement destination of the mobile device;

a program code executing a storing step for storing the received use

information in a history database as history data of the mobile device;

a program code for executing a selecting step for selecting service

information to be distributed to ~~said personal digital assistant~~ the mobile device on the

basis of ~~the use information stored in said history database~~ the history database in which

the use information received by said receiving step is reflected; and

a program code for executing a distributing step for distributing the service

information selected by said selecting step to ~~said personal digital assistant~~ the mobile

device.
